I.

It will be necessary, for several reasons, to give this short sketch the form rather of a critical essay than of a biography. The data for a life of Nathaniel Hawthorne are the reverse of copious, and even if they were abundant they would serve but in a limited measure the purpose of the biographer. Hawthorne’s career was probably as tranquil and uneventful a one as ever fell to the lot of a man of letters; it was almost strikingly deficient in incident, in what may be called the dramatic quality. Few men of equal genius and of equal eminence can have led, on the whole, a simpler life. His six volumes of Notebooks illustrate this simplicity; they are a sort of monument to an unagitated fortune. Hawthorne’s career had few vicissitudes or variations; it was passed, for the most part, in a small and homogenous society, in a provincial, rural community; it had few perceptible points of contact with what is called the world, with public events, with the manners of his time, even with the life of his neighbours. Its literary incidents are not numerous. He produced, in quantity, but little. His works consist of four novels and the fragment of another, five volumes of short tales, a collection of sketches, and a couple of story-books for children. And yet some account of the man and the writer is well worth giving. Whatever may have been Hawthorne’s private lot, he has the importance of being the most beautiful and most eminent representative of a literature. The importance of the literature may be questioned, but at any rate, in the field of letters, Hawthorne is the most valuable example of the American genius.

—from “Hawthorne” by Henry James (1843-1916)
II.

It is universally acknowledged that there is a great uniformity among the actions of men, in all nations and ages, and that human nature remains still the same, in principles and operations. The same motives always produce the same actions: The same events follow from the same causes. Ambition, avarice, self-love, vanity, friendship, generosity, public spirit: these passions, mixed in various degrees, and distributed through society, have been, from the beginning of the world, and still are, the source of all the actions and enterprises, which have ever been observed among mankind. Would you know the sentiments, inclinations, and course of life of the Greeks and Romans? Study well the temper and actions of the French and English: You cannot be much mistaken in transferring to the former most of the observations which you have made with regard to the latter. Mankind are so much the same, in all times and places, that history informs us of nothing new or strange in this particular. Its chief use is only to discover the constant and universal principles of human nature, by showing men in all varieties of circumstances and situations, and furnishing us with materials from which we may form our observations and become acquainted with the regular springs of human action and behaviour. These records of wars, intrigues, factions, and revolutions, are so many collections of experiments, by which the politician or moral philosopher fixes the principles of his science, in the same manner as the physician or natural philosopher becomes acquainted with the nature of plants, minerals, and other external objects, by the experiments which he forms concerning them. Nor are the earth, water, and other elements, examined by Aristotle, and Hippocrates, more like to those which at present lie under our observation than the men described by Polybius and Tacitus are to those who now govern the world.

—from ‘History as Guide’ by David Hume (1711-1776)
